*Thermal imaging cameras enable energy loss prevention at campus facilities nationwide...*

## **KNIGHT EDUCATIONAL PRODUCTS OFFERS COMPACT THERMAL IMAGING INFRARED CAMERAS**

DALLAS, TX (February 14, 2012) – Knight Electronics’ Educational Products Division, a global manufacturer and supplier of medical, trade and educational products, and training equipment, now offers a series of infrared cameras that provide affordable thermal imaging for building diagnostics and preventive maintenance. The rugged FLIR i-Series infrared cameras provide accurate point-and-shoot thermal imaging and temperature detection to help find sources of energy loss, locate moisture damage, detect mechanical wear, check energized equipment, justify repairs, and minimize maintenance and downtime costs.

The FLIR i-Series infrared cameras are an easier, faster, far more accurate and a safer alternative to IR thermometers. Delivering higher resolutions and more detailed images and measurements, the economical FLIR i-Series is an ideal tool for both students and professionals serving as energy auditors, building inspectors, electrical contractors, predictive maintenance specialists, HVAC professionals, insulation experts, restoration contractors, and many other professions.

Colleges and universities will find these devices serve a dual purpose, since students can use them in their coursework, and campus facilities specialists can use these devices to significantly reduce maintenance time and cost. Knight Educational Products offers the following models of Swedish-manufactured FLIR infrared cameras: i3, i5 and i7.

“Due to a prohibitively high cost, professionals were once limited to inaccurate temperature guns to inspect areas like large buildings, HVAC machinery, motors and exhaust systems,” said David Luna, vice president of sales and marketing for Knight Educational Products. “Now every specialist or specialist-in-training can carry one of these cameras in their tool belt.”
